Evolution of MVP

How AI is changing the way MVPs are built

Compared to others

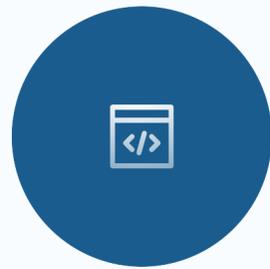

A closer look at the market alternatives

About Inoxoft

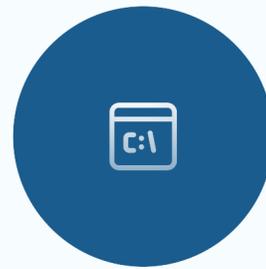

- ▶ **11 years of experience**
- ▶ **Clutch 5.0 Rating**
- ▶ **Strategic member of “InSoft Partners” Holding**

Dimension	AI Prototyping (Lovable / v0)	OneManArmy OS	Classic MVP
Primary Goal	Visualize idea and test messaging	Build minimal production-grade business core	Build full-featured market-ready MVP
Core Risk Addressed	UX and communication risk	Product-market and execution risk	Engineering scale risk
Type of Validation	Perception validation	Real usage validation	Scaled usage validation
Signal Quality for Investors	Weak. Vision-level only	Strong. Early traction with real users and data	Strong. Near-market-ready asset
Business Asset Created	None or disposable	Compounding technical asset	Heavy but surable product asset
Code Longevity	Fully disposable	Built to evolve, no rewrite required	Long-term foundation
Scalability Potential	Low. Requires rebuild	High. Production-ready architecture	High
Time to First Feedback	Days	8–14 weeks	6–9 months
Speed to Meaningful Metrics	Low. Mostly qualitative	Medium–High. Real behavioral data	High, but delayed
Team Structure	Prompting / solo builder	Integrated senior-level core team	Multiple specialized roles
Execution Risk	Hidden. Real complexity postponed	Managed early	Managed late
Estimated Cost	\$20–\$500	\$30k–\$40k	\$150k–\$450k
Best Used When	Testing concept framing	Validating real product viability with controlled budget	Scaling proven demand
